

Alibaba (BABA US/9988 HK) Intact medium term outlook

- Decent 4Q19 results with 53% YoY increase in non-GAAP net profit and 38% revenue growth
- Short-term logistics hiccup amid coronavirus outbreak but medium term outlook remain intact
- Maintain BUY on leading market position in the ecommerce market

4Q19 highlight. Alibaba reported a decent set of result in 4Q19. Revenue grew by 38% YoY to RMB161.5bn, while non-GAAP net profit rose by 53% YoY to RMB48.6bn. Gross margin improved sequentially from 44.9% in 3Q19 to 47.8% in 4Q19, while core net margin improved to 30.1% in 4Q19 versus 29.0% in 3Q19.

Impact from coronavirus outbreak. Overall, business was impacted after CNY due to disturbances of logistics in various regions amid current coronavirus outbreak, which could potentially impact its upcoming 1Q19 results, in our view. On a positive note, we believe the potential full-year impact to FY3/21 could be more manageable as major logistics companies have begun to resume operations in recent days. In addition, the company could potentially benefit from consumption shifting from offline to online especially for groceries and food products.

Intact medium term outlook. Looking beyond the short-term hiccup, Alibaba's fundamental outlook remains intact, in our view. We continue to like Alibaba's leading market position in the ecommerce sector, with ongoing market share gains. In addition, Alibaba has been transforming its business from an online distribution platform to a technology enabler for online merchants via effective use of A.I. and big data technology.

Valuation and recommendation. We maintain BUY on its leading market position in the ecommerce sector. Our TP for Alibaba-H (9988 HK) and Alibaba-ADR (BABA US) are HK\$251 and USD258 respectively.

Risk factors: 1) Regulatory action on cloud computing in overseas market; 2)Tightening regulation on internet finance; 3) Intensified competition; 4) Slowdown in ecommerce; 5) No dividend record to ordinary shareholders.

4Q19 highlight

Overall, Alibaba reported a decent set of result in 4Q19. Revenue grew by 38% YoY to RMB161.5bn, largely in line with market expectation.

Core commerce revenue growth remained resilient at 38% YoY in 3Q19. Tmall online physical goods GMV growth remained solid at 24% YoY in 4Q19 with strong growth in fast-moving consumer goods and consumer electronics. In addition, local consumer service (mainly Ele.me) experienced decent revenue growth of 47% YoY in 4Q19 driven by ongoing penetration into less developed areas and synergies with Ant Financial.

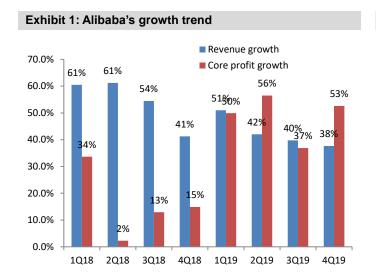

On the other hand, cloud computing continued to experience rapid revenue growth of 62% YoY in 4Q19 driven by both public cloud and hybrid cloud businesses.

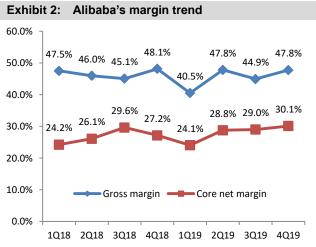

Non-GAAP net profit, on the other hand, rose by 53% YoY to RMB48.6bn, 16% higher than market expectation thanks to cost control and economy of scale.

Gross margin improved sequentially from 44.9% in 3Q19 to 47.8% in 4Q19, while core net margin improved to 30.1% in 4Q19 versus 29.0% in 3Q19.

Overall, business was impacted after CNY due to disturbances of logistics in various regions amid current coronavirus outbreak, which could impact its upcoming 1Q19 (4QFY3/20) results.

On a positive note, we believe the potential full-year impact to FY3/21 (starting in April 2020) could be more manageable as the logistics industry gradually resumes operations in coming months.

Maintain BUY on intact medium term outlook

We maintain our BUY recommendation on the counter given its leading market position in the e-commerce sector and intact medium term industry outlook.

We derive Alibaba's TP based on SOTP approach, as shown in the below table.

For Alibaba's core business, we apply target multiple of 29x on its FY3/21E core profit. For its strategic investments, we apply 10% discount to the book values.

Alibaba-H (9988 HK): The SOTP approach results in a TP HK\$ 251.

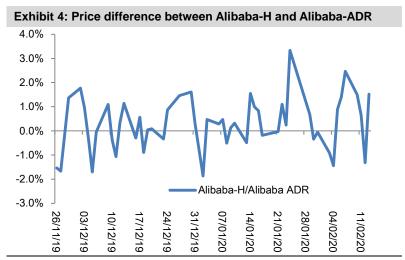

Alibaba-ADR (BABA US): Based on our TP of Alibaba-H, we set the corresponding TP of Alibaba-ADR to be US\$ 258 (1 ADR represents 8 shares).

Exhibit 3: SOTP-based TP

(HKD per share)	TP	Remarks
Core business	235	29x FY21E core profit
Strategic investments	16	10% holding discount on book value
Total	251	

Source(s): Companies, Bloomberg, ABCI Securities estimates

Overall, Alibaba's H-share/ADR price different since the listing of Alibaba-H in late—Nov 2019 is generally below 2.0% with an average of just 0.3%. In our view, this indicates that the HK/US markets are largely efficient with limited arbitrage opportunities between the two counters.

*One ADR represents eight ordinary shares

Risk factors

Regulatory action on cloud computing in overseas market

As the Group operates cloud computing data centers in various overseas market, including Indonesia, Malaysia, India, Australia, Singapore, Germany, Japan, the US and others. Any tightened local regulations in cloud computing would impact its cloud computing operation. In FY3/19, cloud computing accounted for 7% of total revenue.

Tightening regulation on internet finance

As the Group is exposed to the internet finance market via Ant Financials, any tightened regulatory measures in the internet finance market would impact financial performance

Market competition

The Group competed with other online ecommerce platforms, in particular JD.com. The competition will be on commission rate, promotion discount, brand advertising, technological investment, etc.

In particular, we expect competition to intensify if major overseas online platforms, such as Google and Facebook, are allowed to enter the China market.

Slowing of ecommerce consumption

As the Group is exposed to consumer spending on services, any significant slowdown of consumption in China would impact financial performance. In the long term, we believe domestic market growth would converge with income growth, which is usually in line with GDP growth.

No dividend record to ordinary shareholders

The Group has omitted dividend to ordinary shareholders since listing.

Non-GAAP profit

Non-GAAP profits are for reference to ease comparison. It is substantially different from the reported net profit.

Analyst Certification

I, Chow Sau Shing, being the person primarily responsible for the content of this research report, in whole or in part, hereby certify that all of the views expressed in this report accurately reflect my personal view about the subject company or companies and its or their securities. I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this report. I and/or my associates do not serve as officer(s) of the listed company (ies) covered in this report. I and/or my associates have no financial interests (except "Disclosures of Interests" below) in relation to the listed Group (ies) covered in this report.

Disclosures of Interests

ABCI Securities Company Limited and/or its affiliates, within the past 12 months, have investment banking relationship with one or more of the companies mentioned in the report.

Definition of equity rating

Rating	Definition
Buy	Stock return rate≥ Market return rate (10%)
Hold	- Market return rate (-10%) ≤ Stock return rate < Market return rate (+10%)
Sell	Stock return < - Market return (-10%)

Notes: Stock return rate: expected percentage change of share price plus gross dividend yield over the next 12 months Market return rate: average market return rate since 2008 (HSI total return index 2008-19 CAGR at 10%)

Time horizon of share price target: 12-month

Stock rating, however, may vary from the stated framework due to factors including but not limited to: corporate governance, market capitalization, historical price volatility relative to corresponding benchmark index, average daily turnover of the stock relative to market capitalization of the stock, competitive advantages in corresponding industry, etc.
